Field report

The east quay: berths, tides and visitors

A document made for the exav demo. It has a table of contents whose lines are links, an outline in the side panel, page labels, charts drawn as vectors, tables, a picture, and text in embedded fonts. It is in the public domain (CC0-1.0).

Project page: https://exav.org/viewer/

1. The quay

1.1 History

The east quay was built in three stages. The first stage, a timber jetty of twenty berths, dates from the start of the register; the second doubled it in stone, and the third, the long breakwater, shelters both from the south-west swell.

Every berth has a number, a length in metres and a holder. The register is kept on paper and in a table; the two are compared each spring, and the differences are explained in the notes of the harbour master.

Visitors are asked to call the harbour office on channel 9 before they come in, to give the length of their boat and the draught, and to say how many nights they plan to stay. The office will give a berth number and, when the tide is low, the best line of approach.

1.2 Today

Every berth has a number, a length in metres and a holder. The register is kept on paper and in a table; the two are compared each spring, and the differences are explained in the notes of the harbour master.

Visitors are asked to call the harbour office on channel 9 before they come in, to give the length of their boat and the draught, and to say how many nights they plan to stay. The office will give a berth number and, when the tide is low, the best line of approach.

Notes: see the picture and the first table in section 2.[1]

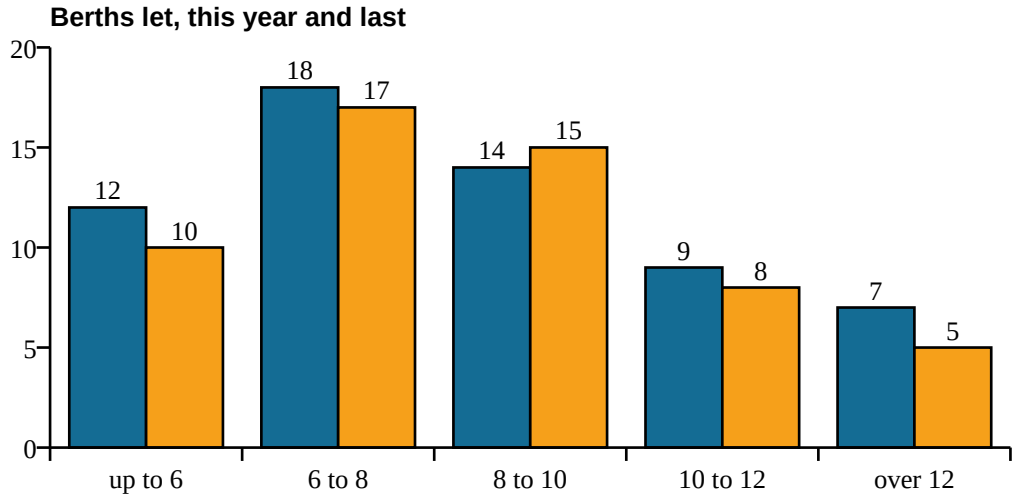

2. Figures

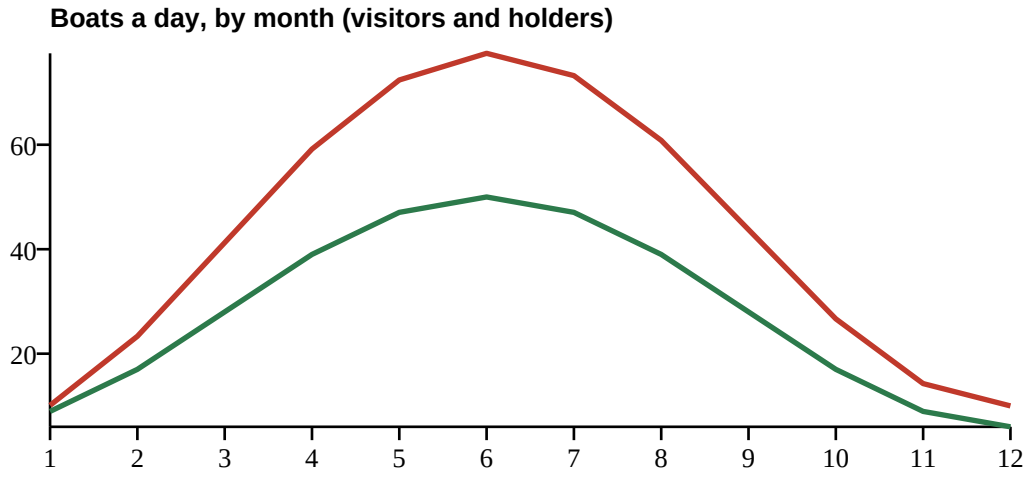

2.1 Berths by length

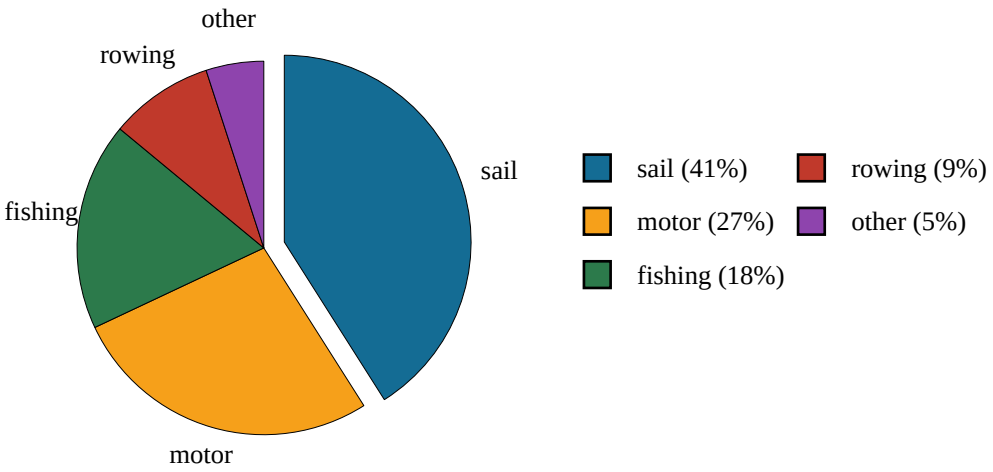

Table 1. Berths by length, with the season's fee.

Length (m)	Berths	Let by	Fee (EUR)	Income (EUR)
up to 6	12	week	18.00	216.00
6 to 8	18	season	24.50	441.00
8 to 10	14	season	31.00	434.00
10 to 12	9	year	42.00	378.00
over 12	7	year	58.50	409.50
Total	**60**			**1878.50**

```
def moor(boat): return berth_for(boat.length)
```

3.3 Preformatted text and a list

```
moor --boat Aurora --length 6.5 berth 14 free until 06:00 (tide table on page 6)
```

- Call the office on channel 9.
- Give the length, the draught and the number of nights.
- Take the berth you are given.

4. Links

4.1 Where they go

An external link: exav.org. A link to another page of this file: back to section 1. A link on a picture, and one around a long phrase that wraps at the end of a line to the next, so that its box is two rectangles: the source of the demo is on GitHub, and this phrase is long enough to wrap.

Visitors are asked to call the harbour office on channel 9 before they come in, to give the length of their boat and the draught, and to say how many nights they plan to stay. The office will give a berth number and, when the tide is low, the best line of approach.

A note on the figures. Lengths are over all, in metres, to one decimal. Fees are in euros and include the tax. Where a table gives a total, it is the sum of the rows above it, rounded once, at the end.

Footnote 1: the table's totals are exact; the charts are rounded.
